

SEMIGROUP

Leader in after-market semiconductor equipment support

CAPABILITY STATEMENT

In business since 1998, SemiGroup is a successful and growing semiconductor manufacturing equipment support business. We have a good track record for providing products and services that our global clients desire. SemiGroup found it's niche by refurbishing after-market parts and equipment all while upholding the original equipment manufacturer's (OEM) specifications. We insure vigorous testing, warranty as well as on-going support for such equipment using the industry's highest standards at a fraction of the price of the OEM. In addition to refurbishing products, SemiGroup now offers its own line of ***Brand New Products*** used in the industry.
